

## Process Control Panels / Enclosures

We can manufacture and supply control panels to your specification, fully wired with control equipment installed and tested to a high quality standard. Over the years we have designed, manufactured and tested Relay control panels, Field terminal cabinets, Variable speed drive panels, Power distribution panels and many others. Here is an outline of services.

### Our services

- Small to medium size Control Panel Design.
- All drawings prepared in electronic format using computer with your company logo if required.
- Control Panel assembled and wired in dust free environment.
- In-house tool room for fabrication and machining, keeping cost and delivery time low.
- Complete testing facilities for HV Megger test and functional checking of devices/schemes.
- Customer witness test / Inspection available before shipment.
- On-site Control Panel Modifications / Refurbishment.

Panels are designed and manufactured as per your requirement. If required you may specify control equipment from our range of signal conditioning units or free issue equipment that you would like installed in your control panel. All work carried out is subject to our intermediate Test / Inspection and our final Test / Inspection prior to it leaving the factory. Further job specific Test / Inspection stages can be included in the manufacturing process on request.

### On-Site Assistance

We have experienced site engineers to assist with installation of our product or to assist with trouble shooting and carry out repairs on site to keep the downtime to minimum. We also understand that in some cases it is not possible to interrupt a process so to keep disruption and your downtime to an absolute minimum, we also offer the service over a weekend / shutdown period.

### Maintenance & Servicing

If you are an end user then you understand the importance of regularly maintaining your installations to avoid potentially disastrous breakdowns. We offer competitive long or short-term solution to meet your needs. We can draw up agreeable routine maintenance schedule and carry out Service checks / refurbishment on site at very competitive rates. Please contact us for further details.
